Computer Science graduate (B.S., UNC Charlotte — Data Science specialization) who designs, builds, and tests complete systems, from an AWS cost-and-risk cleanup dashboard to local-first web apps — and documents the tradeoffs. A case study for every project below: jareds.codes/work.

PROJECTS

Shut It Down — Cloud Lab Cleanup Dashboard (2025)

AWS · FastAPI · Python · Docker · DynamoDB · Boto3 · Pytest

- Detects expensive and risky AWS resources (idle compute, public buckets, policy drift) and guides safe, reversible cleanup with an audit trail
- Estimates per-resource spend from AWS pricing data, classifies risk, and alerts on threshold breaches
- FastAPI + Boto3 scan pipeline persisting to DynamoDB; Dockerized; cost and risk logic covered by a Pytest suite

CalTracker — Accuracy-First Calorie & Macro Tracker (2026)

SvelteKit · Svelte 5 · TypeScript · Supabase (Postgres, Auth, RLS) · Tailwind CSS · Vitest

- Per-100g canonical data model — every total is derived at read time, so a corrected food retroactively fixes past logs
- Four capture paths (camera barcode scanning via ZXing, label entry, USDA FoodData Central search, manual), all quarantined “needs review” until confirmed
- Postgres with row-level security via Supabase SSR auth; six unit-test suites over nutrition math, API clients, auth guard, and DB layer

Personal Gym Tracker — Local-First PWA (2026 · github.com/jaredf96/personal-gym-tracker)

React · TypeScript · Dexie (IndexedDB) · PWA · Supabase · Vitest

- Deterministic, rule-based progressive-overload engine (nine unit-tested modules) — every suggestion explainable and reproducible
- Fully offline, installable local-first design; optional cloud sync scoped per-user by row-level security
- Delivered in explicit hardening phases: data safety, engine truthfulness, then UX

Additional work — explainable resume/JD matching engine, Winston-Lutz medical QA dashboard, aviation-accident NLP analysis: jareds.codes/work

EXPERIENCE

FedEx Ground, Kernersville, NC — Package Handler (Nov 2024 – Mar 2025)

- Met daily productivity targets in a high-volume logistics environment using barcode scanning and internal tracking systems

EDUCATION

University of North Carolina at Charlotte — B.S. Computer Science, Data Science specialization (Aug 2020 – Dec 2023)

GPA 3.3 · Dean's List 2020 · Coursework: Software Engineering, Cloud Computing, Database Design & Implementation, Data Mining, Operating Systems & Networking

SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Java, C/C++

Cloud & Backend: AWS (DynamoDB, Boto3), FastAPI, Docker, Supabase, PostgreSQL (row-level security), Vercel

Frontend: React, SvelteKit/Svelte 5, Tailwind CSS, PWA / offline-first

Data & ML: pandas, scikit-learn, NLP (TF-IDF, clustering), Matplotlib/Seaborn **Testing:** Vitest, Pytest

VOLUNTEERING

Tutoring (middle/high-school math, science, English) · American Red Cross · Second Harvest Food Bank
